

Important Git Commands

① git config

Usage: `git config --global user.name "[name]"`

Usage: `git config --global user.email "[email address]"`

This command sets the author name and email address respectively to be used with your commits.

② git init

Usage: `git init [repository name]`

This command is used to start a new repository.

③ git clone

Usage: `git clone [url]`

This command is used to obtain a repository from an existing URL.

④ git add

Usage: `git add [file]` / `git add *`

This command adds file to the staging area.

⑤ git commit

Usage: `git commit -m "[Commit Message]"`

This command records or snapshots the file permanently in the version history.

⑥ Usage: git commit -a

This command commits any files you've added with the `git add` command and also commits any files you've changed since then.

⑦ git diff

Usage: `git diff`

This command shows the file differences which are not yet staged.

• Usage: `git diff -staged`

This command shows the difference between the files in the staging area and latest version present.

Usage: `git diff [first branch] [second branch]`

This command shows the difference between the two branches mentioned.

⑦ git reset

Usage: `git reset [file]`

This command unstages the file but it preserves the file contents.

Usage: `git reset [commit]`

This command undoes all the commits after the specified commit and preserves the changes locally.

Usage: `git reset --hard [commit]`

This command discards all history and goes back to the specified commit.

⑧ git status

Usage: `git status`

This command lists all the files that have to be committed.

⑨ git rm

Usage: `git rm [file]`

This command deletes the file from your working directory and stages the deletion.

⑩ git log

Usage: `git log`

This command is used to list the version history for the current branch.

Usage: `git log --follow [file]`

This command lists version history for a file, including the renaming of files also.

⑪ git show

Usage: git show [commit]

This command shows the metadata and content changes of the specified commit.

⑫ git tag

Usage: git tag [commit ID]

This command is used to give tags to the specified commit.

⑬ git branch

Usage: git branch

This command lists all the local branches in the current repository.

Usage: git branch [branch name]

This command creates a new branch.

Usage: git branch -d [branch name]

This command deletes the feature branch.

⑭ git checkout

Usage: git checkout [branch name]

This command is used to switch from one to another branch.

Usage: git checkout -b [branch name]

This command creates a new branch and also switches to it.

⑮ git merge

Usage: git merge [branch name]

This command merges the specified branch's history into the current branch.

⑯ git remote

Usage: git remote add [variable name] [Remote server URL]

This command is used to connect your local repository to the remote server.

⑦ git push

Usage: `git push [variable name] master.`

This command sends the committed changes of master branch to your remote repository.

Usage: `git push [variable name] [branch]`

This command sends the branch commits to your remote repository.

Usage: `git push -all [variable name]`

This command pushes all branches to your remote repository.

⑧ git push [variable name] :[branch name]

This command deletes a branch on your remote repository.

⑧ git pull

Usage: `git pull [repository link]`

This command fetches and merges changes on the remote server to your working directory.

⑨ git stash

Usage: `git stash save.`

This command temporarily stores all the modified tracked files.

Usage: `git stash pop.`

This command restores the most recently stashed files.

Usage: `git stash list.`

This command lists all stashed changesets.

Usage: `git stash drop.`

This command discards the most recently stashed change set.
